IEE Proceedings

GENERATION, TRANSMISSION AND DISTRIBUTION

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 146 1999 UK ISSN 1350–2360

HONORARY EDITORS

Prof. E.J. Handschin (*University of Dortmund*)
Prof. J.R. McDonald (*University of Strathclyde*)
Dr. B. Fox (*The Queen's University of Belfast*)

Pages in issues of *IEE Proc., Gener. Transm. Distrib.* 1999

Pages	Issue No.	Date
1–100	1	January
101–208	2	March
209–336	3	May
337–408	4	July
409–540	5	September
541–664	6	November

Zhou, X.X. p301, p577
Zielichowski, M. p241

AC MACHINES

Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Influence of load on operating conditions of third harmonic ground-fault protection system of unit connected generators p241

ADAPTIVE CONTROL

Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Nonlinear adaptive control of TCSC to improve the performance of power systems p301

ARTIFICIAL INTELLIGENCE

Neural network based power system damping controller for SVC p370

ASYNCHRONOUS MACHINES

Design and evaluation of a wind farm protection relay p37
Improvements in the performance of self-excited induction generator through series compensation p602
Steady-state analysis of single-phase self-excited induction generator p421
Undervoltage load shedding for induction motor dominant loads considering P, Q coupling p337

CABLES AND OVERHEAD LINES

Accurate fault location technique for distribution system using fault-generated high-frequency transient voltage signals p73
Contactless surge sensor using a distributed closed loop detector p101
Evaluation of electricity distribution system design strategies p53
Feature extraction methods for neural network-based transmission line fault discrimination p209
Method for rating power cables buried in surface troughs p360
Multipurpose overhead lines protection algorithm p441
Power-frequency magnetic shielding of heavy-current conductors by rectangular shields p223
Transmission line fault location for phase-to-earth fault using one-terminal data p121

CIRCUIT THEORY AND DESIGN

Methodology for simulating the response of nonlinear power circuits p568

CLOSED LOOP SYSTEMS

Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200

CONTROL EQUIPMENT

Migration path study of a distribution SCADA system p313

CONTROL SYSTEM ANALYSIS

Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Anticipatory load shedding scheme for loadability enhancement p483
Applications of modelling UPFC into multi-machine power systems p306
Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507
Control setting of unified power flow controllers through a robust load flow calculation p365
Damping function of unified power flow controller p81
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Direct load control using fuzzy dynamic programming p294
Expert system for enhancing voltage security/stability in power systems p349
FACTS control design based on power system nonparametric models p409
Fixed transmission rights for zonal congestion management p471
Inverter controller for HVDC systems connected to weak AC systems p235
Migration path study of a distribution SCADA system p313
Neural network based power system damping controller for SVC p370
Nonlinear adaptive control of TCSC to improve the performance of power systems p301
Overview of control schemes for TCSC to enhance the stability of power systems p125
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200
Phillips-Heffron model of power systems installed with STATCOM and applications p521
Predictive current control of distribution static compensator for reactive power compensation p515
Robust damping of inter-area oscillations in power systems with superconducting magnetic energy storage devices p633
Security-based rescheduling of transactions in a deregulated power system p13
Security dispatch using the Hopfield neural network p465
Stability analysis of HVDC control loops p143

CONTROL SYSTEM STABILITY

Anticipatory load shedding scheme for loadability enhancement p483
Applications of modelling UPFC into multi-machine power systems p306
Damping function of unified power flow controller p81
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Expert system for enhancing voltage security/stability in power systems p349
FACTS control design based on power system nonparametric models p409
Fast valving scheme using parallel valves for transient stability improvement p330
Improved ANN αth-order inverse TCSC controller for enhancing power system transient stability p550
Inverter controller for HVDC systems connected to weak AC systems p235
Learning-coordinate fuzzy logic control of dynamic quadrature boosters in multi-machine power systems p577
Neural network based power system damping controller for SVC p370
Overview of control schemes for TCSC to enhance the stability of power systems p125
Phillips-Heffron model of power systems installed with STATCOM and applications p521
Robust damping of inter-area oscillations in power systems with superconducting magnetic energy storage devices p633
Stability analysis of HVDC control loops p143
Strategy for the control of multiple series compensators in the enhancement of interconnected power system stability p149

CONTROL SYSTEM SYNTHESIS

Applications of modelling UPFC into multi-machine power systems p306
Control setting of unified power flow controllers through a robust load flow calculation p365
Damping function of unified power flow controller p81
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Direct load control using fuzzy dynamic programming p294
FACTS control design based on power system nonparametric models p409
Inverter controller for HVDC systems connected to weak AC systems p235
Neural network based power system damping controller for SVC p370
Nonlinear adaptive control of TCSC to improve the performance of power systems p301
Robust damping of inter-area oscillations in power systems with superconducting magnetic energy storage devices p633

DATA ACQUISITION

Migration path study of a distribution SCADA system p313

DC MACHINES

Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Influence of load on operating conditions of third harmonic ground-fault protection system of unit connected generators p241
Modelling of DC drives for power system harmonic analysis p217

DRIVES

Modelling of DC drives for power system harmonic analysis p217

ELECTROMAGNETIC COMPATIBILITY

Power-frequency magnetic shielding of heavy-current conductors by rectangular shields p223

ELECTROMAGNETISM

Inductance and winding eddy loss of air-cored reactors p416

ELECTRIC VARIABLES CONTROL

Analysis of transformer inrush transients in offshore electrical systems p89
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Design and operation of cascaded active power filters for the reduction of harmonic distortions in a power system p193
FACTS control design based on power system nonparametric models p409
Investigation of a unified power flow controller p400
Method for green field security-constrained allocation of reactive support p65
Neural network based power system damping controller for SVC p370
Nonlinear adaptive control of TCSC to improve the performance of power systems p301
Optimising location of unified power flow controllers using the method of augmented Lagrange multipliers p428
Overview of control schemes for TCSC to enhance the stability of power systems p125
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200
Phillips-Heffron model of power systems installed with STATCOM and applications p521
Predictive current control of distribution static compensator for reactive power compensation p515
PWM-controlled series compensation on a radial feed power system p377

ENERGY CONVERSION

Robust damping of inter-area oscillations in power systems with superconducting magnetic energy storage devices p633

ENGINEERING COMPUTING

Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Anticipatory load shedding scheme for loadability enhancement p483
Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507

Control setting of unified power flow controllers through a robust load flow calculation p365
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Expert system for enhancing voltage security/stability in power systems p349
Extended Petri net models for fault diagnosis for substation automation p229
Inverter controller for HVDC systems connected to weak AC systems p235
Migration path study of a distribution SCADA system p313
Security-based rescheduling of transactions in a deregulated power system p13
Security dispatch using the Hopfield neural network p465

EXPERT SYSTEMS

Expert system for enhancing voltage security/stability in power systems p349
Knowledge-based neural network for voltage contingency selection and ranking p649

FEEDBACK

Improved ANN αth-order inverse TCSC controller for enhancing power system transient stability p550
Inverter controller for HVDC systems connected to weak AC systems p235
Switching control for power systems with line losses p435

FIBRE OPTIC SENSORS

Intelligent optical fibre monitoring of oil-filled circuit breakers p557
Optical-fibre-based investigations of contact travel, gas pressure and particle concentration in SF_6 puffer circuit breakers p453

FUZZY CONTROL

Direct load control using fuzzy dynamic programming p294
Learning-coordinate fuzzy logic control of dynamic quadrature boosters in multimachine power systems p577
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200

INSULATORS AND INSULATION

Optical-fibre-based investigations of contact travel, gas pressure and particle concentration in SF_6 puffer circuit breakers p453
Power-frequency magnetic shielding of heavy-current conductors by rectangular shields p223

MAGNETIC MATERIALS AND DEVICES

Inductance and winding eddy loss of air-cored reactors p416

MATHEMATICAL TECHNIQUES

Analysis of equivalent 10 Hz voltage flicker in power systems p447
Automatic fuzzy model identification for short-term load forecast p477
Extended Petri net models for fault diagnosis for substation automation p229
Inverse matrix modification lemma and Thevenin theorem for compensated network solutions p496
Modelling of DC drives for power system harmonic analysis p217
Multipurpose overhead lines protection algorithm p441
Optimal reactive power planning against voltage collapse using the successive multiobjective fuzzy LP technique p343
Reliability evaluation of substation control systems p626
Wavelet-transform-based algorithm for harmonic analysis of power system waveforms p249

MEASUREMENT OF SPECIFIC VARIABLES

Contactless surge sensor using a distributed closed loop detector p101
Improvement of electrical properties of grounding loops by using bentonite and waste drilling mud p1
Innovative procedure for measurement of losses of transformers supplying nonsinusoidal loads p617
Intelligent optical fibre monitoring of oil-filled circuit breakers p557
Optical-fibre-based investigations of contact travel, gas pressure and particle concentration in SF_6 puffer circuit breakers p453

MEASUREMENT SCIENCE

Comparison of touch and step voltages between IEEE Std 80 and IEC 479-1 p593

MULTIVARIABLE CONTROL SYSTEMS

Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200

NEURAL NETWORKS

Application of algorithms and artificial-intelligence approach for locating multiple harmonics in distribution systems p325
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Feature extraction methods for neural network-based transmission line fault discrimination p209
Hierarchical dynamic state estimator using ANN-based dynamic load prediction p541
Improved ANN αth-order inverse TCSC controller for enhancing power system transient stability p550
Knowledge-based neural network for voltage contingency selection and ranking p649
Neural network based power system damping controller for SVC p370
Security dispatch using the Hopfield neural network p465
Two-phase neural network based solution technique for short term hydrothermal scheduling p657
Visualisation of voltage stability in large electric power systems p573

NONLINEAR CONTROL SYSTEMS

Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
FACTS control design based on power system nonparametric models p409
Nonlinear adaptive control of TCSC to improve the performance of power systems p301

NUMERICAL ANALYSIS

Automatic fuzzy model identification for short-term load forecast p477
Control setting of unified power flow controllers through a robust load flow calculation p365
Effects of very fast transient overvoltages on transformer p459
Fuzzy-logic method for adjustment of variable parameters in load-flow calculation p276
Inverter controller for HVDC systems connected to weak AC systems p235
Multipurpose overhead lines protection algorithm p441
Robust damping of inter-area oscillations in power systems with superconducting magnetic energy storage devices p633
Thevenin source resistances of the touch, transferred and step voltages of a grounding system p107
Two-phase neural network based solution technique for short term hydrothermal scheduling p657
Wavelet-transform-based algorithm for harmonic analysis of power system waveforms p249

OPTIMAL CONTROL

Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Direct load control using fuzzy dynamic programming p294
FACTS control design based on power system nonparametric models p409
Inverter controller for HVDC systems connected to weak AC systems p235
Predictive current control of distribution static compensator for reactive power compensation p515
Security-based rescheduling of transactions in a deregulated power system p13

OPTIMISATION

Advanced constrained genetic algorithm load flow method p609
Anticipatory load shedding scheme for loadability enhancement p483
Direct load control using fuzzy dynamic programming p294
Optimal reactive power dispatch using evolutionary computation: extended algorithms p586
Optimal reactive power planning against voltage collapse using the successive multiobjective fuzzy LP technique p343
Security and revenue reconciliation in optimal transmission pricing p355
Thevenin source resistances of the touch, transferred and step voltages of a grounding system p107

POWER CONVERTERS

Computer simulation and measurements of HVDC harmonics p131
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Digital and laboratory implementation of a generalised minimum variance controller for an HVDC link p181
Innovative procedure for measurement of losses of transformers supplying nonsinusoidal loads p617
Inverter controller for HVDC systems connected to weak AC systems p235
Learning-coordinate fuzzy logic control of dynamic quadrature boosters in multimachine power systems p577
Methodology for simulating the response of nonlinear power circuits p568
Nonlinear adaptive control of TCSC to improve the performance of power systems p301
Overview of control schemes for TCSC to enhance the stability of power systems p125
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200
Phillips-Heffron model of power systems installed with STATCOM and applications p521
Predictive current control of distribution static compensator for reactive power compensation p515

POWER ELECTRONICS

Methodology for simulating the response of nonlinear power circuits p568

POWER ENGINEERING COMPUTING

Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Anticipatory load shedding scheme for loadability enhancement p483
Application of algorithms and artificial-intelligence approach for locating multiple harmonics in distribution systems p325
Automatic fuzzy model identification for short-term load forecast p477
Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507
Control setting of unified power flow controllers through a robust load flow calculation p365
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Digital and laboratory implementation of a generalised minimum variance controller for an HVDC link p181
Evaluation of electricity distribution system design strategies p53
Experimental test of a load model in the presence of harmonics p186
Expert system for enhancing voltage security/stability in power systems p349
Extended Petri net models for fault diagnosis for substation automation p229

Feature extraction methods for neural network-based transmission line fault discrimination p209
Hierarchical dynamic state estimator using ANN-based dynamic load prediction p541
Improved ANN αth-order inverse TCSC controller for enhancing power system transient stability p550
Inverter controller for HVDC systems connected to weak AC systems p235
Knowledge-based neural network for voltage contingency selection and ranking p649
Migration path study of a distribution SCADA system p313
Multipurpose overhead lines protection algorithm p441
Security-based rescheduling of transactions in a deregulated power system p13
Security dispatch using the Hopfield neural network p465
Two-phase neural network based solution technique for short term hydrothermal scheduling p657
Visualisation of voltage stability in large electric power systems p573

POWER SYSTEM CONTROL

Active filter used as a controlled reactance to prevent harmonic resonance in interconnected offshore power systems p393
Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Analysis of transformer inrush transients in offshore electrical systems p89
Anticipatory load shedding scheme for loadability enhancement p483
Applications of modelling UPFC into multi-machine power systems p306
Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507
Control setting of unified power flow controllers through a robust load flow calculation p365
Damping function of unified power flow controller p81
Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Decentralised nonlinear H_∞ control for stability enhancement in power systems p19
Design and operation of cascaded active power filters for the reduction of harmonic distortions in a power system p193
Digital and laboratory implementation of a generalised minimum variance controller for an HVDC link p181
Direct load control using fuzzy dynamic programming p294
Expert system for enhancing voltage security/stability in power systems p349
Extended Petri net models for fault diagnosis for substation automation p229
FACTS control design based on power system nonparametric models p409
Fast valving scheme using parallel valves for transient stability improvement p330
Fixed transmission rights for zonal congestion management p471
Improved ANN αth-order inverse TCSC controller for enhancing power system transient stability p550
Inverter controller for HVDC systems connected to weak AC systems p235
Investigation of a unified power flow controller p400
Knowledge-based neural network for voltage contingency selection and ranking p649
Learning-coordinate fuzzy logic control of dynamic quadrature boosters in multimachine power systems p577
Load control services in the management of power system security costs p269
Method for green field security-constrained allocation of reactive support p65
Migration path study of a distribution SCADA system p313
Neural network based power system damping controller for SVC p370
Nonlinear adaptive control of TCSC to improve the performance of power systems p301
Optimal reactive power planning against voltage collapse using the successive multiobjective fuzzy LP technique p343
Optimising location of unified power flow controllers using the method of augmented Lagrange multipliers p428
Overview of control schemes for TCSC to enhance the stability of power systems p125
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200
Phillips-Heffron model of power systems installed with STATCOM and applications p521
Predictive current control of distribution static compensator for reactive power compensation p515
Probabilistic on-line transient stability analysis p176
PWM-controlled series compensation on a radial feed power system p377
Reliability evaluation of substation control systems p626
Robust damping of inter-area oscillations in power systems with superconducting magnetic energy storage devices p633
Security-based rescheduling of transactions in a deregulated power system p13
Security dispatch using the Hopfield neural network p465
Stability analysis of HVDC control loops p143
Strategy for the control of multiple series compensators in the enhancement of interconnected power system stability p149
Switching control for power systems with line losses p435
Unit commitment health analysis in composite generation and transmission systems considering stand-by units p164
Visualisation of voltage stability in large electric power systems p573

POWER SYSTEM MANAGEMENT

Active filter used as a controlled reactance to prevent harmonic resonance in interconnected offshore power systems p393
Anticipatory load shedding scheme for loadability enhancement p483
Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507
Demand-side management opportunities for the UK domestic sector p283
Deregulated power system planning using a reliability network equivalent technique p25
Fixed transmission rights for zonal congestion management p471
Integrated approach to transmission services pricing p255
Load control services in the management of power system security costs p269
Optimal reactive power dispatch using evolutionary computation: extended algorithms p586
Predictive current control of distribution static compensator for reactive power compensation p515
Reliability worth of distribution system network reinforcement considering dispersed customer cost data p318
Security and revenue reconciliation in optimal transmission pricing p355
Security-based rescheduling of transactions in a deregulated power system p13
Security dispatch using the Hopfield neural network p465
Strategy for the control of multiple series compensators in the enhancement of interconnected power system stability p149
Switching control for power systems with line losses p435
Undervoltage load shedding for induction motor dominant loads considering P, Q coupling p337
Using Monte Carlo simulation for overall distribution system reliability worth assessment p535

POWER SYSTEM PROTECTION

Anticipatory load shedding scheme for loadability enhancement p483
Design and evaluation of a wind farm protection relay p37
Expert system for enhancing voltage security/stability in power systems p349
Extended Petri net models for fault diagnosis for substation automation p229
Feature extraction methods for neural network-based transmission line fault discrimination p209
Impact of embedded generation on emergency reserve p159
Improvement of electrical properties of grounding loops by using bentonite and waste drilling mud p1
Influence of load on operating conditions of third harmonic ground-fault protection system of unit connected generators p241
Load control services in the management of power system security costs p269
Multipurpose overhead lines protection algorithm p441
Thevenin source resistances of the touch, transferred and step voltages of a grounding system p107

POWER SYSTEMS AND APPLICATIONS

Analysis of transformer inrush transients in offshore electrical systems p89
Demand-side management opportunities for the UK domestic sector p283
Direct load control using fuzzy dynamic programming p294

POWER SYSTEMS AND PLANTS

Accurate fault location technique for distribution system using fault-generated high-frequency transient voltage signals p73
Active filter used as a controlled reactance to prevent harmonic resonance in interconnected offshore power systems p393
Advanced constrained genetic algorithm load flow method p609
Analysis of equivalent 10 Hz voltage flicker in power systems p447
Automatic fuzzy model identification for short-term load forecast p477
Capacitor placement in radial distribution systems for loss reduction p501
Capacity planning in small isolated power systems using probabilistic methods p61
Computer simulation and measurements of HVDC harmonics p131
Contactless surge sensor using a distributed closed loop detector p101
Deregulated power system planning using a reliability network equivalent technique p25
Design and evaluation of a wind farm protection relay p37
Design and operation of cascaded active power filters for the reduction of harmonic distortions in a power system p193
Determination of the optimum site-matching wind turbine using risk-based capacity benefit factors p96
Dynamic equivalents of tap-changing-under-load transformers in a transmission system p45
Effects of very fast transient overvoltages on transformer p459
Evaluation of electricity distribution system design strategies p53
Experimental test of a load model in the presence of harmonics p186
Extended Petri net models for fault diagnosis for substation automation p229
FACTS control design based on power system nonparametric models p409
Fast valving scheme using parallel valves for transient stability improvement p330
Fuzzy-logic method for adjustment of variable parameters in load-flow calculation p276
Generating capacity planning criteria determination for developing countries: case study of Nepal p491
Hierarchical dynamic state estimator using ANN-based dynamic load prediction p541
Identification of harmonic sources of power systems using state estimation p7
Impact of embedded generation on emergency reserve p159
Improvements in the performance of self-excited induction generator through series compensation p602
Inverse matrix modification lemma and Thevenin theorem for compensated network solutions p496
Load research for fault location in distribution feeders p115
Multipurpose overhead lines protection algorithm p441
Optimal reactive power planning against voltage collapse using the successive multiobjective fuzzy LP technique p343
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200
Reliability and production assessment of wind energy production connected to the electric network supply p169
Reliability evaluation of substation control systems p626
Reliability worth of distribution system network reinforcement considering dispersed customer cost data p318
Switching control for power systems with line losses p435
Transmission line fault location for phase-to-earth fault using one-terminal data p121
Two-phase neural network based solution technique for short term hydrothermal scheduling p657
Unit commitment health analysis in composite generation and transmission systems considering stand-by units p164
Well-being framework for composite generation and transmission system reliability evaluation p528

POWER TRANSMISSION AND DISTRIBUTION

Accurate fault location technique for distribution system using fault-generated high-frequency transient voltage signals p73
Active filter used as a controlled reactance to prevent harmonic resonance in interconnected offshore power systems p393
Advanced constrained genetic algorithm load flow method p609
Analysis of equivalent 10 Hz voltage flicker in power systems p447
Application of algorithms and artificial-intelligence approach for locating multiple harmonics in distribution systems p325
Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507
Capacitor placement in radial distribution systems for loss reduction p501
Computer simulation and measurements of HVDC harmonics p131

Damping function of unified power flow controller p81
Design and operation of cascaded active power filters for the reduction of harmonic distortions in a power system p193
Digital and laboratory implementation of a generalised minimum variance controller for an HVDC link p181
Dynamic equivalents of tap-changing-under-load transformers in a transmission system p45
Evaluation of electricity distribution system design strategies p53
Experimental test of a load model in the presence of harmonics p186
FACTS control design based on power system nonparametric models p409
Fixed transmission rights for zonal congestion management p471
Fuzzy-logic method for adjustment of variable parameters in load-flow calculation p276
Hierarchical dynamic state estimator using ANN-based dynamic load prediction p541
Identification of harmonic sources of power systems using state estimation p7
Influence of load on operating conditions of third harmonic ground-fault protection system of unit connected generators p241
Integrated approach to transmission services pricing p255
Inverter controller for HVDC systems connected to weak AC systems p235
Investigation of a unified power flow controller p400
Knowledge-based neural network for voltage contingency selection and ranking p649
Load research for fault location in distribution feeders p115
Method for load-flow solution of radial distribution networks p641
Migration path study of a distribution SCADA system p313
Modelling of DC drives for power system harmonic analysis p217
Modelling the degradation of condition indices p386
More sophisticated synchronous machine model and the relevant harmonic power flow study p261
Network reconfiguration for load balancing in distribution networks p563
Optimising location of unified power flow controllers using the method of augmented Lagrange multipliers p428
Performance of sliding-mode and fuzzy controllers for a static synchronous series compensator p200
Predictive current control of distribution static compensator for reactive power compensation p515
PWM-controlled series compensation on a radial feed power system p377
Reliability and production assessment of wind energy production connected to the electric network supply p169
Reliability worth of distribution system network reinforcement considering dispersed customer cost data p318
Security and revenue reconciliation in optimal transmission pricing p355
Stability analysis of HVDC control loops p143
Strategy for the control of multiple series compensators in the enhancement of interconnected power system stability p149
Switching control for power systems with line losses p435
Transmission line fault location for phase-to-earth fault using one-terminal data p121
Unit commitment health analysis in composite generation and transmission systems considering stand-by units p164
Using Monte Carlo simulation for overall distribution system reliability worth assessment p535
Wavelet-transform-based algorithm for harmonic analysis of power system waveforms p249
Well-being framework for composite generation and transmission system reliability evaluation p528

PREDICTIVE CONTROL

Predictive current control of distribution static compensator for reactive power compensation p515

RELIABILITY

Deregulated power system planning using a reliability network equivalent technique p25
Generating capacity planning criteria determination for developing countries: case study of Nepal p491
Integrated approach to transmission services pricing p255
Modelling the degradation of condition indices p386
Reliability and production assessment of wind energy production connected to the electric network supply p169
Reliability evaluation of substation control systems p626
Reliability worth of distribution system network reinforcement considering dispersed customer cost data p318
Unit commitment health analysis in composite generation and transmission systems considering stand-by units p164
Using Monte Carlo simulation for overall distribution system reliability worth assessment p535
Well-being framework for composite generation and transmission system reliability evaluation p528

SELF-ADJUSTING SYSTEMS

Damping of power system oscillations using adaptive thyristor-controlled series compensators tuned by artificial neural networks p137
Learning-coordinate fuzzy logic control of dynamic quadrature boosters in multi-machine power systems p577
Nonlinear adaptive control of TCSC to improve the performance of power systems p301

SENSORS AND ACTUATORS

Contactless surge sensor using a distributed closed loop detector p101

SIMULATION, MODELLING AND IDENTIFICATION

Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507
Hierarchical dynamic state estimator using ANN-based dynamic load prediction p541
Migration path study of a distribution SCADA system p313

STATISTICAL ANALYSIS

Adaptive estimation of wide range frequency changes for power generator protection and control purposes p31
Analysis of equivalent 10 Hz voltage flicker in power systems p447
Capacity planning in small isolated power systems using probabilistic methods p61
Direct load control using fuzzy dynamic programming p294
Evaluation of electricity distribution system design strategies p53
Modelling the degradation of condition indices p386
Probabilistic on-line transient stability analysis p176
Reliability and production assessment of wind energy production connected to the electric network supply p169
Reliability worth of distribution system network reinforcement considering dispersed customer cost data p318
Using Monte Carlo simulation for overall distribution system reliability worth assessment p535
Well-being framework for composite generation and transmission system reliability evaluation p528

SUPERCONDUCTING MATERIALS AND DEVICES

Robust damping of inter-area oscillations in power systems with superconducting magnetic energy storage devices p633

SWITCHGEAR

Effects of very fast transient overvoltages on transformer p459
Intelligent optical fibre monitoring of oil-filled circuit breakers p557
Optical-fibre-based investigations of contact travel, gas pressure and particle concentration in SF_6 puffer circuit breakers p453
Reliability evaluation of substation control systems p626

SYNCHRONOUS MACHINES

Block diagram model for fundamental studies of a synchronous generator-static VAr compensator system p507
More sophisticated synchronous machine model and the relevant harmonic power flow study p261

TRANSFORMERS

Analysis of transformer inrush transients in offshore electrical systems p89
Design and evaluation of a wind farm protection relay p37
Dynamic equivalents of tap-changing-under-load transformers in a transmission system p45
Effects of very fast transient overvoltages on transformer p459
Experimental test of a load model in the presence of harmonics p186
Inductance and winding eddy loss of air-cored reactors p416
Innovative procedure for measurement of losses of transformers supplying non-sinusoidal loads p617
Load research for fault location in distribution feeders p115
